Scott –

This may be an LCARD issue which we can refer to Kelly Bunker. IMO, I think their request is reasonable.

Subject: SAPA/Cressona

Good morning. I have an old legacy site that has a Consent Decree from 1998 that established a quarterly monitoring for PCBs and DNAPL. It's the ALCOA/Cressona facility in Pottstown, Now called ALCOA/SAPA. They have a financial assurance component to the Decree that requires they keep financial assurance to complete remaining PCB remediation work at the facility. They also installed a network of monitoring wells and piezometers to conduct groundwater sampling. In the annual groundwater monitoring report that I receive from them, they regularly find low levels of PCBs in their monitoring well system. However, they are also required to sample and analyze for DNAPLS. They have not had a detectable DNAPL hit in any of their samples since 2005. They have requested to reduce the frequency of their DNAPL sampling and analysis to annually, instead of quarterly.

I don't have any reason to deny this, unless you or someone else does. Should we even be handling this. Is there someone else we should inform before proceeding or allowing this request? Let me know and I will move forward accordingly. Best regards
